

the planning, implementation, and monitoring of NIH research programs, as well as to strengthen strategy management in NIH research programs.

The questions asked, and the data to be collected are rooted in established business-based paradigms but specifically adapted for use (and relevance) in a biomedical research environment, in order to discern: (1) Factors that enhance (or inhibit) organizational effectiveness in research programs; (2) utility and acceptance of

these kinds of efforts among biomedical researchers and research stakeholders. The results from this formative research project will inform quality improvement activities in several areas, including goal setting, capability and resource evaluation, operational efficiency, and performance monitoring. Utilized data collection methodologies will be administered in a manner that minimizes public information collection burden. These include, but are not limited to, surveys, focus groups, and/

or cognitive interviews. Separate and distinct generic clearances are requested to facilitate the efficiency of submission and review of these projects as required by the OMB Office of Information and Regulatory Affairs.

OMB approval is requested for 3 years. There are no costs to respondents other than their time. The total estimated annualized burden hours are 4775.

ESTIMATED ANNUALIZED BURDEN HOURS
